Multi-Year SRF Project List	9
Additional Needs	24
Sand/Salt Sheds	25

INTRODUCTION

Fiscal year 1989 marked the beginning of Maine's transition from a grant program to project financing by the State Revolving Loan Fund (SRF). Fifty percent of Maine's allocation in FY89 and 90 went to the loan fund and all federal dollars from FY91 on are capitalization grants to the SRF. States must provide a 20% match to receive the federal dollars authorized. Maine citizens approved over \$29 million in bond issues that provided the state match for fiscal years 1989 through FY2001. The Maine Municipal Bond Bank (MMBB) is the financial manager of Maine's SRF and the Department of Environmental Protection (DEP) administers technical aspects of the program and individual projects funded by it. The primary purpose of the fund is to, "acquire, design, plan, construct, enlarge repair or improve publicly-owned sewage systems, sewage treatment plants or to implement related management programs". The long term goal of the SRF is to maintain and improve Maine's inventory of municipal sewage facilities in perpetuity. This will ensure preservation of the water quality gains that were realized by initial construction of them.

In 1996 the 117th Maine Legislature expanded the eligible use of the Maine SRF to include the remediation of municipal landfills that effect groundwater. Only municipal landfill projects that have been designated as a federal Super Fund Site or a state Uncontrolled Hazardous Waste Site are eligible to receive SRF loans.

In an attempt to try and meet the long term needs of treatment facilities in Maine, the Bond Bank, in addition to lending capitalization grant and state matching dollars, can lend three bond dollars for every one federal and state dollar available. This is accomplished by making parallel loans of capitalization grants at 0% and bond loan dollars at market rates to maximize total loan needs for water quality. Currently the state match has been funded by appropriations of State of Maine General Obligation Bonds as approved by voters. It is expected to continue this way, but in the event that it is not received in any one year, the Bond Bank would be prepared to issue revenue bonds to meet its state matching obligations and maintain the viability of the SRF program.

It is the goal of the Maine SRF program to preserve the principal amounts of capitalization grant dollars in perpetuity while fulfilling its lending obligations to treatment facilities within Maine in the easiest and most cost effective manner possible. Maine continues to strive for funding mechanisms that will expedite loan repayments of current capitalization grant dollars to increase turnaround and create more funding for future loans in years following the award of capitalization grants.

Multi-Year SRF Project List

Maine's SRF was established to provide a perpetual funding mechanism for communities and districts with wastewater facilities. This list contains the State's inventory of wastewater facilities and the SRF is a source of funding to each one, should they choose to use it. Each year the DEP will prepare an Intended Use Plan (IUP) and projects will be selected from this list and assigned an environmental priority by the Municipal Priority Point System at that time. However, if there is sufficient funds, any entity on the Multi-Year Project List may apply for an SRF loan during the fiscal year.

Additional Needs

The Communities listed here do not have wastewater treatment facilities. Pollution problems exist that impair water quality classifications/uses or endanger public health. These communities are also eligible for SRF assistance or the projects may be funded by a combination of grants and loans from the DEP and/or other sources. After construction of wastewater facilities is complete in these communities they will be transferred to the Multi-Year SRF Project List as part of the states inventory of wastewater facilities.

Municipal Landfills

In 1996, the 117th Maine Legislature expanded the eligible use of the Maine State Revolving Loan Fund (SRF) to include the remediation of municipal landfills that effect groundwater. Only municipal landfills projects that have been designated as a federal Super Fund Site or a state Uncontrolled Hazardous Waste Site are eligible to receive SRF loans.

Sand/Salt Sheds

Beginning in 2004 the DEP will provide SRF funds to municipalities to design and construct sand/salt sheds in areas that the DEP has determined that ground water or surface water has been contaminated by sand/salt piles.

DEPARTMENT OF ENVIRONMENTAL PROTECTION MUNICIPAL CONSTRUCTION GRANTS PROGRAM

State law gives the DEP flexibility to use grant dollars with other sources of funding to provide an affordable financing package for municipal wastewater facilities. Most past projects were funded with a combination of Environmental Protection Agency (EPA) grants, DEP grants and both loan and grant assistance from Rural Development (formally known as Farmers Home Administration). The EPA grants program has ended but Rural Development continues to be a major funding source. Maine's inventory of wastewater facilities would be much smaller without the excellent past performance of the Farmers Home Administration. Some projects have also been funded by combining DEP grants with funds from Economic Development Administration, Department of Economic and Community Development, Housing and Urban Development and Community Development Block Grants.

Maine's SRF has replaced the EPA grant program. It is program policy to keep user charge from exceeding 2% of a communities Median Household Income (MHI) by using DEP grant dollars in combination with the SRF Loans. The user charge is operation and maintenance expenses plus debt service on the SRF loan. The 2% goal

is examined periodically when new MHI information is available. Maine Revised Statutes Annotated Title 38, Chapter 3, Section 411 and 412 provide the nucleus for the Department of Environmental Protection's policy in formulating a priority system. Section 411 and 412 are reproduced, in part, below for informational purposes.

38_411. State contribution to pollution abatement

"The commissioner may pay an amount not to exceed 80% of the expense of a municipal or quasi-municipal pollution abatement construction program or a pollution abatement construction program in an unorganized township or plantation authorized by the county commissioners. The commissioner may make payments to the Maine Municipal Bond Bank to supply the State's share of the revolving loan fund established by Title 30-A, section 6006-A..."

"State grant-in-aid participation under this section is limited to grants for waste treatment facilities, interceptor systems and outfalls. The word "expense" does not include costs relating to land acquisition or debt service, unless allowed under federal statutes and regulations."

"All proceeds of the sale of bonds for the construction and equipment of pollution abatement facilities expended under the direction and supervision of the commissioner must be segregated, apportioned and expended as provided by the Legislature."

38_412. Grants by State for planning.

1. Grants by State for planning. The commissioner is authorized to pay an amount at least 15%, but not to exceed 25%, of the expense incurred by a municipality or quasi-municipal corporation in preliminary or final planning of a pollution abatement program in the form of a grant. The amount may not be paid until the governing body of the municipality or the quasi-municipal corporation duly votes to proceed with preliminary or final planning of a pollution abatement program, as appropriate.
 - A. For the purposes of this section, "preliminary planning" means engineering studies that include analysis of existing pollution problems; estimates of the cost of alternative methods of waste treatment, studies of areas to be served by the proposed facilities and estimates of the cost of serving such areas; preliminary sketches of existing and proposed sewer and treatment plant layouts; and estimates of alternative methods of financing, including user charges, and other studies and estimates designed to aid the municipality or quasi-municipal corporation in deciding whether and how best to proceed with a pollution abatement program.
 - B. For the purposes of this section, "final planning" means the preparation of engineering drawings and specifications for the construction of waste treatment facilities, interceptor systems and outfalls or other facilities specifically designated in departmental rules. All proceeds from the sale of bonds for the planning of pollution abatement facilities expended under the direction and supervision of the commissioner must be segregated, apportioned and expended as provided by the Legislature.

MUNICIPAL PRIORITY POINT SYSTEM

The Department of Environmental Protection has established a Priority Point System to place proposed wastewater treatment projects in a listing according to their relative priority. The system contains five (5) basic priorities which relate to the public health hazard created by the wastes or to the use of the waters to which wastes are discharged. In addition to these five basic priorities there is a subsystem with point values of 0, 6 or 12 points that indicates the intensity of the problem as being either low, medium or high.

All five priorities and the subsystems are discussed in detail below.

Base Points

<u>Priority 1</u>	Water Supply Protection	30 Points
-------------------	-------------------------	-----------

The project to be funded will eliminate a source of ground or surface water supply contamination. This priority denotes that a potential public health hazard does exist and that without such project alternative sources of water would be required or additional water treatment would be necessary.

<u>Priority 2</u>	Lakes Protection	25 Points
-------------------	------------------	-----------

This priority denotes that the project will eliminate or improve facilities discharging directly or indirectly to lakes and ponds which create detrimental impacts on trophic state.

<u>Priority 3</u>	Shellfishery Protection	20 Points
-------------------	-------------------------	-----------

This priority includes projects that will eliminate sources of contamination to shell fishing areas. The project will eliminate sources of waste that are partially or wholly responsible for a shellfishery area presently being closed.

<u>Priority 4</u>	Water Quality Concerns	15 Points
-------------------	------------------------	-----------

This priority denotes that the project will reduce the level of pollutants to waterbodies shown to be in violation of present classification or where a proposed project can be expected to raise quality to the next higher classification.

<u>Priority 5</u>	Facility Needs	10 Points
-------------------	----------------	-----------

This category includes all structural deficiencies of collection, transport and treatment systems. Such things as untreated sewage creating a public health hazard, a project to meet general water quality standards or a treatment plant not meeting effluent criteria would be in this category.

PRIORITY SUBSYSTEMS

The priorities of water supply and shellfisheries involve other agencies in the state. The Health Engineering Division of Human Services is responsible for the water supply program in Maine (Priority 1). The Department of Marine Resources manages shellfishing areas (Priority 3). Accordingly these agencies have developed the subsystems which relate to the intensity of the problem for these priorities. DEP staff has developed the subsystems for priority 2,4 and 5. Inland Fish and Wildlife is the

agency responsible for management of inland and anadromous fisheries. DEP receives input from Inland Fish and Wildlife when water quality problems impact these fisheries.

The intensity of the problem (Low, Medium, High) is identified by the subsystem for that category. The agency having jurisdiction applies the subsystem to each project in their category of responsibility. For example, if a category 3. project (Shellfishery Protection) was determined to be a medium intensity problem by the Department of Marine Resources it would be assigned 26 points on the priority list (3-M). Several projects may be in the same category and assigned equal points. The second regular session of the 113th Legislature included median household income, MHI, as a factor in determining funding priority. Projects with the same point assignment will be ordered by MHI with the lowest income community receiving the highest priority within that subsystem category.

Priority Points Assignment

	Low	Medium	High
1. Water Supply Protection	30	36	42
2. Lakes Protection	25	31	37
3. Shellfishery Protection	20	26	32
4. Water Quality Concern	15	21	27
5. Facility Needs	10	16	22

1. Water Supply Protection

Five criteria are used in this subsystem with each having a point value of 1,2, or 3 points. The assignment to a level of intensity is arrived at as follows:

Low Range	1 x 5 = 5	(0-5) Points
Medium Range	2 x 5 = 10	(6-10) Points
High Range	3 x 5 = 15	(11-15) Points

1. Population Served	2,000(1)-10,000(3)
2. Degree of Dependence on Water Source Alternate(1)--No Alternate(3)	
3. Difficulty of Treatment	Proven(1)—Experimental(3)
4. Existing Treatment	Full(1)—None(3)
5. Cost of Treatment	1% of Revenue(1)--10% of Revenue(3)

2. Lakes Protection

Low(0) Facility has minor effect on trophic state of a lake.

Medium(6) Existence of marginal trophic quality or increasing trophic conditions

High(12) Conditions exist in a lake which cause non attainment of class GPA

3. Shellfishery Protection

DEP Project(s)#:_____ Base Points:_____

Evaluation Date:_____ Value Related Points:_____

State & Local Interest	High(+3)	Medium(+2)	Low(+1)	
Total Value Related Points_____				

Definition of Terms

Shellfish Production:

Potential	A shellfish growing area is considered to be a <u>potential</u> growing area when all environmental factors (chemical, physical and biological) exist within levels suitable for the propagation of shellfish, or if historical records indicate the area to be one time productive.
Limited	A shellfish area is considered to have <u>limited</u> harvesting when current or past shellfish availability would yield quantities of less than 1/2 bushel per tide and/or less than 1/8 acre in size.
Commercial	A shellfish area is considered to have <u>commercial</u> harvesting when current or past shellfish availability would yield quantities greater than 1/2 bushels per tide and/or greater than 1/8 acre in size.

Estimated Value of Resource:

An estimated dollar value will be assigned to each growing area based on the standing crop and current market value (3.85 x landed value).

Projected Area Reclassification:

General	If after abatement, the projected area reclassification would meet the standards suitable for open harvesting, the highest number of value related points will be given (value judgment).
Conditional	If after abatement, the projected area reclassification would meet the standards suitable for conditional harvesting, then the next highest value related points will be assigned (value judgment).
Depuration	If after abatement, the projected reclassification at best would meet the standards for depuration harvesting, then the lowest number of value related points will be given (value judgment).

Economic Importance:

Value related points will be assigned to those areas where the shellfishing resource is considered to have an economic impact on the local economy. Factors that will be considered are:

- (1) Number of licensed diggers utilizing the resource (past, present and future);
- (2) Other opportunities available for generating personal income;
- (3) Local market value of the resource, current or potential.

State and Local Interest (Shellfish Management Program):

Value related points will be given to those areas where a sincere interest in pollution abatement, shellfish management, aquaculture or other related interests in the marine resources has been demonstrated.

4. Water Quality Concerns

- Low(0) Water quality standards are achieved, however, project could lead to designation of next higher classification.
- Medium(6) Projects which would result in improved habitat, production or other enhancement of the fishery.
- High(12) Water quality standards are not achieved for designated class.

5. Facility Needs

- Low(0) A project with the base point assignment has a relatively minor problem by comparison with others in this category. A deficiency exists or the potential for a public health hazard is evident but the operational impact if any is minor and the public health dangers only slight.

Medium(6) This sub-priority indicates the existence of a substantial problem that may involve several of the factors in the Facility Needs category. The structural deficiencies cause problems and/or the risk of public health problems is more than slight.

High(12) The assignment of this level is made only for those facilities having the most severe structural/operational problems and/or a public health hazard exists.

ADDITIONAL NEEDS PROJECTS

NOTES ON PRIORITY LIST FORMAT

Description of Projects

	TYPE	WORKS
(NEW)	New waste treatment	1. Outfall sewer
(INC)	Modification of existing system with increase in capacity (INC)	2. Interceptor sewer
(INT)	Modifications of existing system with increase in treatment level (INT)	3. Collector sewer
(ICT)	Modification of existing system with increase in both capacity and treatment level (ICT)	4. Force main 5. Pumping Station
(MOD)	Modification to existing system with no increase in capacity or treatment level - interceptor pumping station, etc. (MOD)	6. Sewer infiltration correction 7. Separation of combined storm/sanitary sewers 8. Treatment Plant 9. Other Works

Project Step

- | | |
|-------------------------|---------------------|
| 1. Preliminary Planning | 3. Construction |
| 2. Final Planning | 4. Design/Construct |

Needs Categories

I	Secondary Treatment
II	Treatment more stringent than secondary
IIIA	Infiltration/inflow correction
IIIB	Major Sewer System rehabilitation
IVA	New collector sewers and appurtenances
IVB	New interceptors and appurtenances
V	Correction of combined sewer overflows
VI	Storm Water Management
VII	Non-point source
